

Monologue on LIVING IN A DIGITAL AGE (UNIT 1)

Step 1. Introduction 1. Start with a hook sentence that will attract the listener's attention, a quote, a proverb, etc. 2. Lead your speech steadily to the main part of your talk. 3. The introduction may consist of 3-6 sentences.	<i>Living in a digital age is like being part of a constantly evolving story, where technology shapes every aspect of our lives. As a result, the world has become more interconnected, and the way we communicate, work, and even think has been transformed. To begin with, the Digital Age, also known as the Information Age, is characterized by the digitization of information and the near-instant exchange of information. This era has brought about unprecedented changes, and in this monologue, I will explore its key features, the rise of smart machines, the concept of smart cities and homes, and my own creative ideas on how we can adapt to this new reality.</i>
Step 2. The Digital Age 2.1. What is the Digital Age? What features make it different from other ages? 2.2. What are the most important milestones in the history of the Digital Age?	<i>First of all, the Digital Age is defined by the advent of personal computers and the development of fiber optic cables, which have accelerated the transmission and processing of information. In addition, the World Wide Web has revolutionized how we access and share knowledge, making it possible to transmit data across the globe in seconds. For instance, information is now quantitatively encoded as a series of ones and zeroes, allowing it to be stored and processed more efficiently. Moreover, the digitization of information has had a profound impact on industries such as education, healthcare, and entertainment. However, while these advancements have brought many benefits, they have also raised concerns about privacy and data security.</i>
Step 3. Smart machines 3.1. What are smart machines? Speak about positive and negative impact smart machine may have on society 3.2. Describe a smart machine of your choice. What features make it smart?	<i>Moving on to smart machines, these devices are equipped with artificial intelligence (AI) and cognitive computing technologies, enabling them to function without human intervention. For example, self-driving cars use neural networks and voice recognition to navigate roads safely. On the one hand, these machines can automate some human tasks, leading to more efficient manufacturing processes and higher profit margins. On the other hand, they may displace workers and lead to a high rate of unemployment. Despite these challenges, smart machines have the potential to diagnose diseases and recommend the best treatments, improving healthcare outcomes. In my opinion, the key is to find a balance between automation and human involvement.</i>
Step 4. Smart cities and homes 4.1. What is a smart city? Do you live in a smart city? Explain why you think so. 4.2. Smart homes. What are they like? Would you like to live in a smart home? What smart appliances/gadgets will it be equipped with?	<i>Another significant aspect of the Digital Age is the concept of smart cities and homes. A smart city is equipped with intelligent systems and smart city infrastructure, such as Wi-Fi deployment and 5G network architecture. For instance, programmable citywide testbeds allow cities to experiment with new technologies, from mobile edge computing (MEC) to small cell deployment. Similarly, smart homes are equipped with devices with an embedded processor, such as brightness sensors and optical and thermal sensors, which facilitate communication between the user and the system. Would I like to live in a smart home? Absolutely. I imagine a home where voice control features and wireless systems make daily life more convenient and efficient.</i>
Step 5. CREATIVE THINKING Introduce your own extra idea(s) on advertising that hasn't/haven't been mentioned before. Substantiate your choice.	<i>Now, let me introduce a creative idea that hasn't been mentioned yet: the concept of interactive consumer exchange for goods and information through electronic billboards. Imagine walking down the street and seeing a billboard that not only advertises products but also allows you to purchase them instantly using your smartphone. This idea could revolutionize advertising by creating a seamless connection between consumers and brands. Furthermore, it could accelerate the transmission and processing of information, making shopping more convenient and personalized.</i>

Step 6. Conclusion Summarise the ideas of steps 2,3,4,5.	In conclusion, the Digital Age has brought about remarkable changes, from the digitization of information to the rise of smart machines and smart cities. While these advancements have dramatically changed the nature of work and other societal norms, they also present challenges that need to be addressed. By embracing new technologies and finding innovative solutions, we can ensure that the Digital Age benefits everyone. As a final thought, I believe that the future lies in our ability to adapt and thrive in this ever-changing digital landscape.
